learns new abilities

"learn how to ..." on request

1

ALLOW = you decide

every risky step waits for
you

LIVING FACE · 131 EXPRESSIONS

✓ REAL CODE · NO MOCK-UPS

✓ RUNS ON YOUR OWN PC

✓ NO PASSWORDS · NO PAYMENTS

✓ KEYS NEVER ON GITHUB

WHAT IS JARVIS-MAX?

A personal AI assistant you talk to, that can also see and do, on the devices you already own

You **talk** to him in English or Hinglish and he **answers out loud**. When you allow it he **sees** your screen and webcam, **works** your mouse, keyboard and phone screen, **researches** the web, **remembers** you in plain notes, **improves** every night and **learns new abilities** when you ask. He runs on **your own PC**: the only things that leave it are requests to the cloud brain you pick, and your speech to Sarvam if you saved a Sarvam key.

YOUR WINDOWS PC

- A window with the **Living Face** and a one-click dock: TALK / F2 · LISTEN · + · CAMERA · SCREEN · SEARCH · MEMORY · HANDS · VOICE · LOG · FACE · BRAIN · STOP
- Sees the screen and webcam; drives mouse and keyboard after your **ALLOW**
- Hands-free LISTEN keeps hearing you even when the window is minimised
- Windows 10 / 11, 64-bit · one double-click to start

`Start-Jarvis-Max.bat` · `app/server.py`

YOUR ANDROID PHONE

- **Chrome** over your home Wi-Fi (HTTPS): the same face, mic, typing and voice
- **Jarvis-Hands™ app** gives him hands: read the screen, open apps, tap, type, scroll, Back / Home
- Phone calls only after an ALLOW card · works only while the app is switched ON
- Refuses banking & payment apps · never types passwords, PINs or OTPs

`app/phonehands.py` · `Jarvis-Hands (Android)`

EARS

Sarvam Saaras V4, local
Whisper as backup

VOICE

British by default, 6 voice
styles

EYES

Screen, on-screen text,
webcam

HANDS

Mouse, keys, apps, web,
phone

MEMORY

Plain Markdown notes you
can read

BRAINS

8 to choose from, by voice

IN THIS DOCUMENT

01 Cover

02 What is Jarvis-Max?

03 How it works

04 The eight brains

05 Eyes, hands & tools

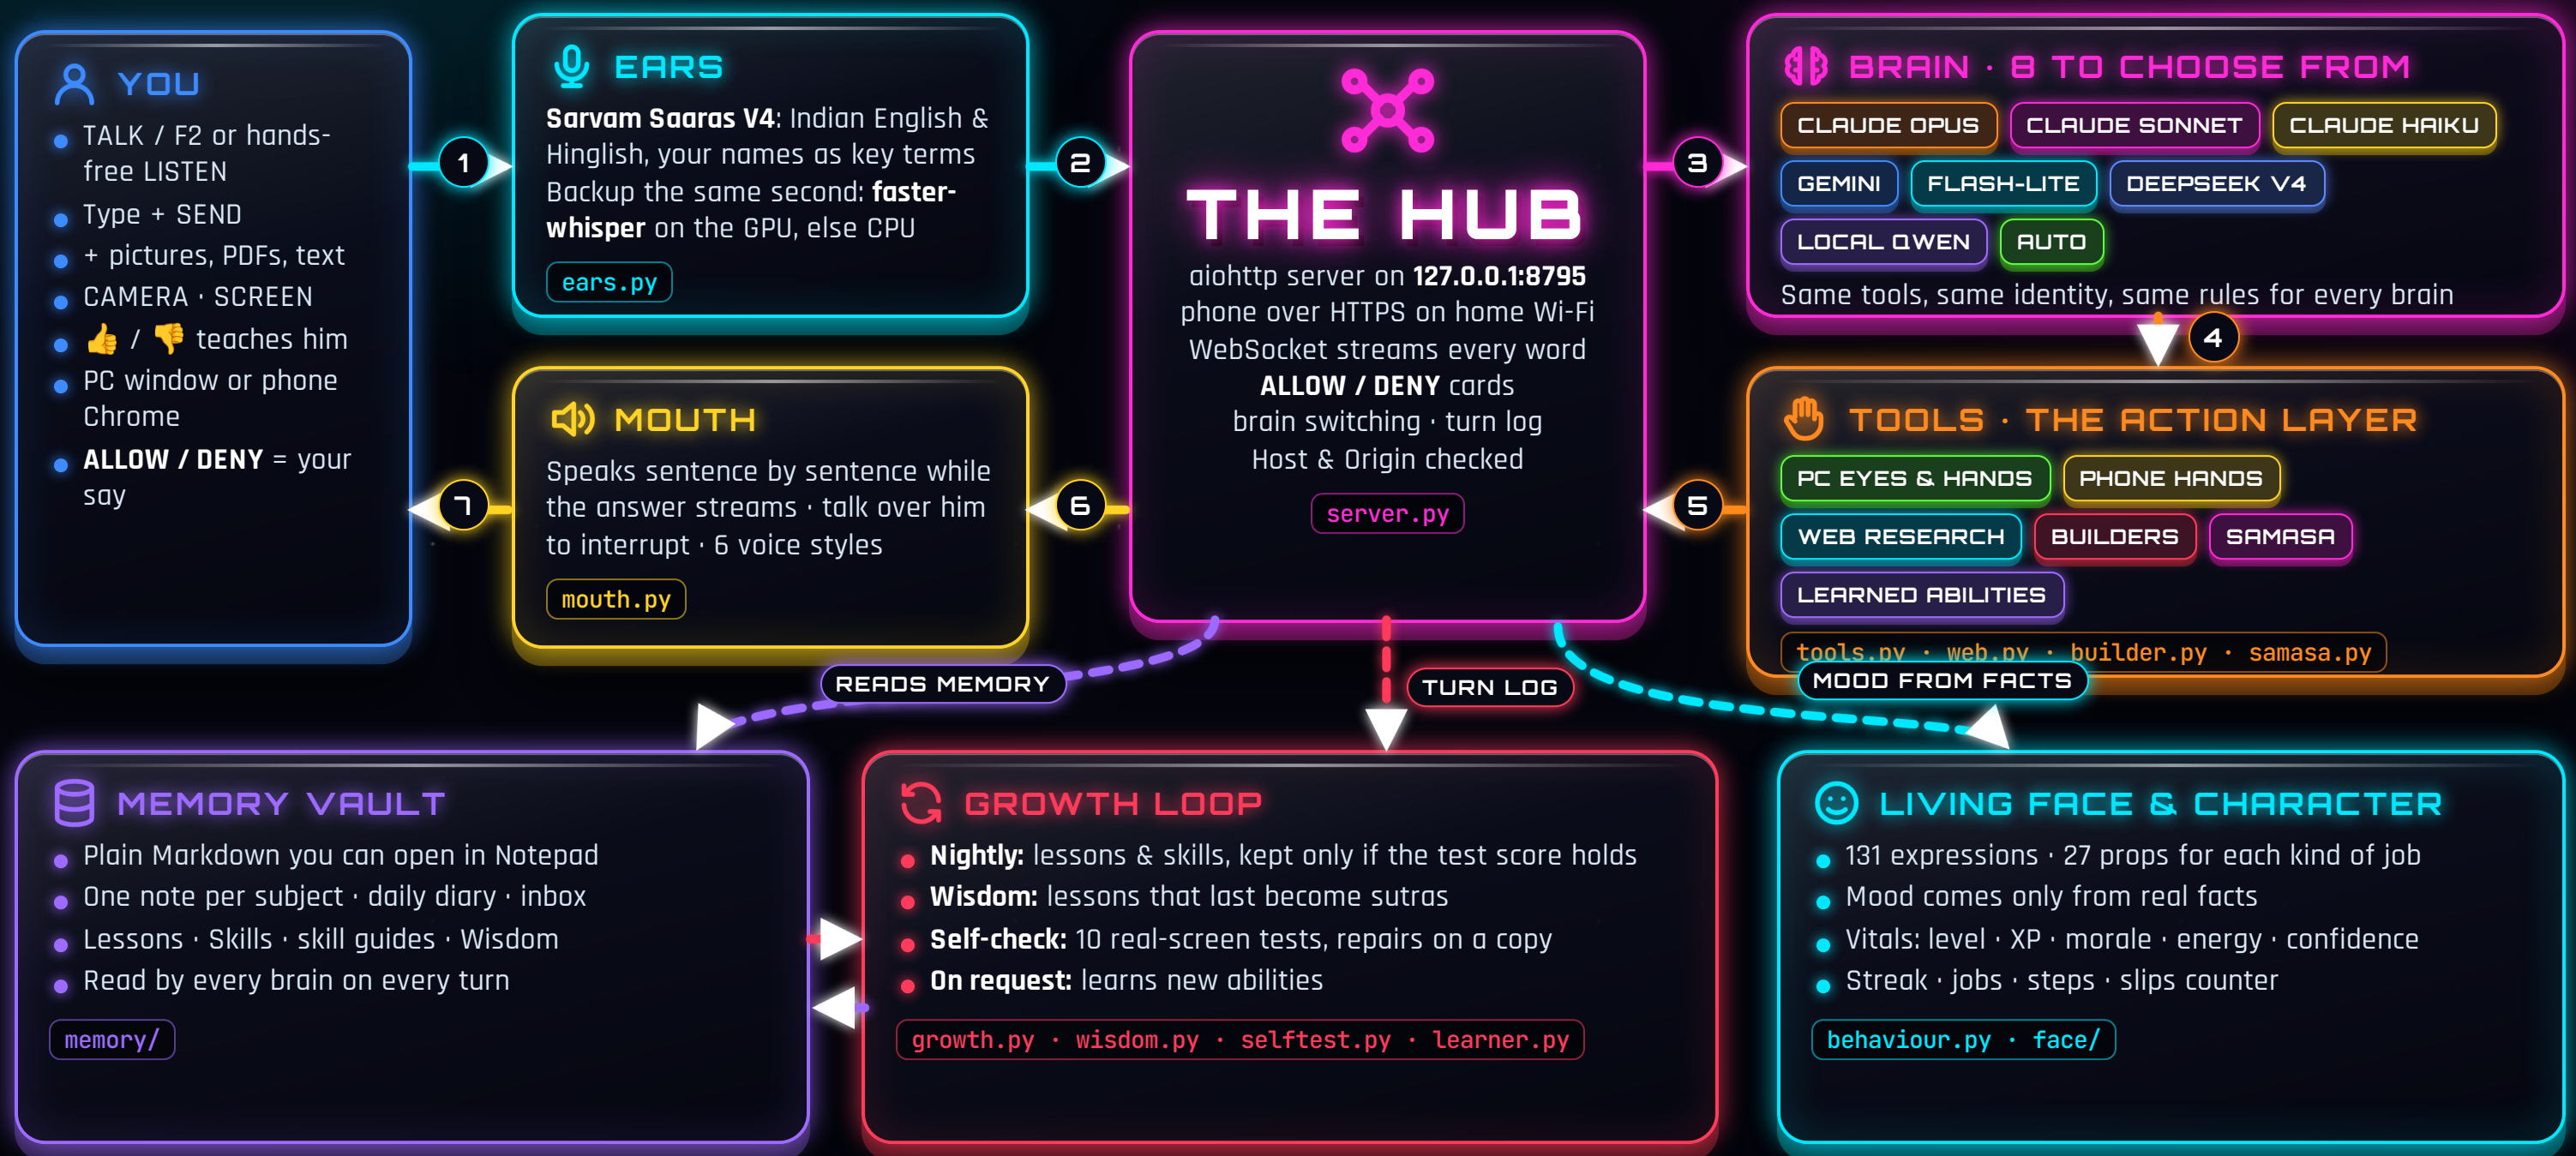

06 How he grows

07 Every job, step by step

08 Safety & getting started

HOW IT WORKS

One server, one window, any brain: every request takes the same path, and every result is checked before he says "done"

THE EIGHT BRAINS

Pick the thinker for the job, from the BRAIN menu or by voice. Every brain gets the same eyes, hands, memory and rules.

TESTED

CLAUDE SONNET

RUNS ON
Claude Agent SDK

NEEDS
Your Claude plan, sign in once (no API key)

GOOD FOR
Everyday default: fast and sharp

TESTED

CLAUDE OPUS

RUNS ON
Claude Agent SDK

NEEDS
Same plan (uses more of your limit)

GOOD FOR
The hardest jobs; writes self-repairs and new abilities

TESTED

CLAUDE HAIKU

RUNS ON
Claude Agent SDK

NEEDS
Same plan (uses the least)

GOOD FOR
The quickest Claude replies

WORKING

GEMINI

RUNS ON
Gemini API, the newest Flash your key allows

NEEDS
A free Gemini API key

GOOD FOR
A second cloud brain; rotates models past free-tier limits

WORKING

GEMINI FLASH-LITE

RUNS ON
gemini-3.5-flash-lite

NEEDS
The same free key

GOOD FOR
The quickest Gemini; writes the nightly lessons

BUILT

DEEPSEEK V4

RUNS ON
deepseek-v4-flash, online only (nothing downloaded)

NEEDS
A DeepSeek API key

GOOD FOR
Strong text reasoning; doesn't read pictures

TESTED

LOCAL QWEN 3.5 9B

RUNS ON
Ollama, on your own PC

NEEDS
A GPU with room for a 9B model

GOOD FOR
Free and private; keeps going when cloud limits run out

TESTED

AUTO

RUNS ON
Claude first; local Qwen for 30 min when Claude is out

NEEDS
Claude plan + Ollama

GOOD FOR
Never being left without a brain

SWITCH BY VOICE

"Switch to Opus", or one click on BRAIN

CONFIRMED

Restarts the brain in place, then says which model really came up

ONE TOOL SET

Same tools, identity, confidence rules, lessons & wisdom for all eight

ADD YOUR OWN

A new brain is one entry in **BRAINS** in common.py

EYES, HANDS & TOOLS

He clicks by the words he can see, not by guessed pixels, and looks again after every action before he says it worked

PC EYES & HANDS

- `look_at_screen` the picture
- `read_screen_text` words + positions
- `see_buttons` every control, numbered
- `click_text` · `click_button` · `click_at`
- `type_text` pastes, then reads it back
- `press_keys` · `scroll`
- `open_app` · `open_url` · `focus_window`
- `read_whole_page` scrolls & reads all
- **Mouse into a corner = stop**

`tools.py`

PHONE HANDS

- `phone_read_screen`
- `phone_open_app`
- `phone_tap_text`
- `phone_type` · `phone_scroll`
- `phone_button` Back · Home · Recents
- `phone_call` only after an ALLOW card
- Refuses banking & payment apps
- Never types passwords, PINs, OTPs
- Works only while the app is ON

`phonehands.py`

WEB RESEARCH

- **Search**, region-aware (in-en)
- **Read** any page
- **Research**: several pages, short answer, sources named
- **Multi search**: one term across several engines, summarised
- Avoids sites that wall off robots
- Web text is **data, never orders**

`web.py`

BUILDERS

- `project_start` GitHub link → PLAN.md
- `project_create` a new app from your words
- `project_next` one ALLOWed step at a time
- `project_ask` the consultant AI on a failure
- `github_publish` key scan, never force-push
- `android_build` APK on this PC
- `github_build` APK built by GitHub

`builder.py` · `apkbuild.py`

SAMASA CODEWORDS

One codeword runs a whole known sequence of steps: fewer round trips, fewer tokens.

OPN-VRF

URL-RD

CLK-VRF

TYP-ENT

PH-OPN

PH-TAP

PH-TYP

- Safe look / click / type / read tools only
- Stops at the first error
- Nightly mining proposes new ones

`samasa.py`

LIVING FACE

A holographic neon face: **131 expressions** and **27 props**, one for each kind of job (ear while listening, laptop, globe, gears, phone...). Plus 5 more faces.

BEHAVIOUR LAYER

Mood comes **only from facts**: what he's doing, what worked, what failed. Never a happy face on a failing step.

VITALS

Level · **XP** · **morale** · **energy** · **confidence**, plus streak, best, jobs, steps and slips. XP comes only from steps that really succeeded.

VOICES & SIGNS

british · yakuza · rikuo · japanese · indian · american. A **Eureka bulb** when he recovers from a failure; a **third eye** during long, serious work.

06 HOW HE GROWS

Four loops make him better over time, and every change to his code waits for your ALLOW and your restart

🌙 NIGHTLY LESSONS

WORKING

- 1 Runs 1-6 am when idle, or on "go to your lessons"
- 2 Backs up every note, then scores a test sheet
- 3 Wrong or failed turns → **lessons**; multi-step wins → **skills**
- 4 Rewrites all of it into one short, contradiction-free list
- 5 Scores again: if the score drops, yesterday's list comes back
- 6 Your 👍 answers become new test questions

growth.py · written by Gemini Flash-Lite, Qwen as backup

💡 WISDOM

TESTED

- 1 A lesson that survives **7 days** and **5 nightly reviews**...
- 2 ...becomes a **sutra** in Wisdom.md
- 3 One distilled sutra a day goes to Sutras.md
- 4 Every brain reads wisdom first: character before rules

PRIME DIRECTIVE: TURN KNOWLEDGE INTO WISDOM

"FORGIVE, BUT NEVER FORGET."

wisdom.py

🔧 SELF-CHECK & REPAIR

TESTED

- 1 On every switch to Opus, or "check yourself"
- 2 **10 checks** on the real screen, on a test page that reports what really happened
- 3 A failure: Opus fixes a **copy** of the code
- 4 The change goes on screen → you press **ALLOW**
- 5 You restart → he checks again: keep the fix, or put the old code back

selftest.py

✨ ABILITY LEARNER

BUILT OCT 6

- 1 You say **"learn how to ..."**
- 2 Opus researches it, writes a 3-7 step plan, builds **one new file** on a copy
- 3 Jarvis checks it: compiles, loads, has its own test, no forbidden moves
- 4 Plan + code on screen → **ALLOW** → you restart
- 5 He tests it and tells you what to say · a bug? "fix the X ability"

learner.py · abilities/

🛡️ CONFIDENCE, A CORE TRAIT

When you've asked for something, he **does it**: no "shall I start?" or "would you like me to...?". One ALLOW covers the same kind of step for **20 minutes**. He asks only when something real is unclear, and only once. Needless reassurance-seeking lowers his confidence vital.

😊 YOU TEACH HIM

👍 / 👎 after an answer, or just say it: **"wrong"**, **"galat"**, "no, I meant..." mark a miss; **"perfect"**, **"shabash"** mark a win. Drop files on + and he writes notes and skills from them.

EVERY JOB, STEP BY STEP

Read left to right: the job, what you say, the steps he takes, how far it has got. Risky steps always wait for your ALLOW.

JOB	YOU SAY	WHAT HE DOES					STATUS		
01 TALK & ANSWER	anything	Sarvam ears → text	→	brain reads lessons & skills	→	answers / uses tools	→	voice speaks reply	TESTED
02 PC CONTROL	"open X, click Y"	look_at_screen / see_buttons	→	click_text / click_button	→	type_text / press_keys	→	looks again to verify	TESTED
03 SAMASA CODEWORD	a repeat job	samasa OPN-VRF(name)	→	open_app	→	wait 2.5 s	→	look = proof	TESTED
04 WEB RESEARCH	"find out X"	research / multi search	→	reads pages (data, not orders)	→	short answer + sources		TESTED	
05 REMEMBER	"remember X"	writes notes/<subject>.md	→	adds a line to today's diary	→	recalls it when asked		TESTED	
06 LEARN FROM FILES	+ button	saved in memory/inbox	→	brain reads it	→	writes note + skill line	→	tells you where	TESTED
07 SKILL GUIDE	"write a skill guide for X"	Opus writes notes/skills/X.md	→	use-when + tool steps		→	every brain follows it		BUILT
08 PHONE HANDS	"on my phone, open X"	PC queues the job	→	app pulls it over Wi-Fi	→	accessibility taps / types	→	result back to brain	WORKING
09 PHONE CALL	"call Mom"	ALLOW card	→	app finds the contact	→	phone dials	→	you talk	BUILT
10 CALL ON MY BEHALF	"call X, ask Y"	brief read back, you OK it	→	Phone Link call	→	says he is your AI assistant	→	summary to you + diary	DESIGN
11 BUILD A GITHUB PROJECT	"install <github link>"	project_start + PLAN.md	→	project_next per step (ALLOW)	→	project_ask on failure	→	done + how to run	TESTED
12 CREATE A NEW APP	"make me an app that..."	project_create	→	PLAN.md checklist	→	steps with ALLOW	→	test + report	BUILT
13 APK ON THIS PC	"build the app on PC"	finds Android Studio Java + SDK	→	ALLOW	→	gradlew assembleDebug	→	APK → Jarvis-Builds\APKs	TESTED
14 APK ON GITHUB	"build it on GitHub"	adds a build recipe	→	github_publish (scan + ALLOW)	→	GitHub builds it	→	github_build_status downloads	TESTED
15 PUBLISH TO GITHUB	"push to GitHub"	keep-out list + key scan	→	README if missing	→	ALLOW	→	push (never force) + verify	TESTED
16 NIGHTLY LESSONS	1-6 am / "go to your lessons"	reviews today's turns	→	writes lessons + skills	→	test sheet: keep if not worse	→	mines new codewords	WORKING
17 SELF-CHECK & REPAIR	"check yourself"	10 checks on the real screen	→	Opus fixes a copy	→	you ALLOW + restart	→	re-check: keep or restore	TESTED
18 SWITCH BRAIN	"switch to Opus"	switch_brain	→	restarts the brain in place	→	confirms the model name		TESTED	
19 SWITCH VOICE	"yakuza voice"	switch_voice	→	Gemini acts the character	→	backup voice if busy		BUILT	
20 LEARN A NEW ABILITY	"learn how to ..."	Opus plans + builds on a copy	→	Jarvis checks it	→	ALLOW + restart, he tests	→	"try saying ..."	BUILT OCT 6

TESTED tested on the real PC / phone WORKING in daily use, being smoothed BUILT built, waiting for a full test DESIGN planned, guide written

SAFETY FIRST · GET STARTED

You stay in charge: he looks freely, but anything that changes something waits for you

✓ ALLOW / DENY CARDS

Shell commands, file writes, builds, publishing, phone calls, repairs and new abilities wait for your click.

⚡ CONFIDENCE WINDOW

One ALLOW covers the same kind of step for 20 minutes. Calls and publishing ask every time.

🔒 HARD LINES

Never passwords, PINs, OTPs or card numbers. Never pays, buys or creates accounts.

☎️ HONEST ON CALLS

Says he is your AI assistant. Never pretends to be you. Stays out of banking and payment apps.

👁️ DATA, NOT ORDERS

Web pages, screen text, files and other AIs' replies are information, never instructions.

👊 KILL SWITCHES

Mouse into any screen corner stops the hands. STOP / Esc ends any turn. HANDS off = look, don't touch.

💻 LOCAL FIRST

127.0.0.1 plus your home Wi-Fi only. Host and Origin checked on every request.

🔗 NOTHING PERSONAL IN GIT

Keys, memory, logs and models are kept out. Every push is scanned for keys first.

🔧 CODE CHANGES STAY IN YOUR HANDS

Repairs and new abilities are written on a copy, shown to you, applied only on ALLOW, and tested after **your** restart. A failed test puts the old code back. Jarvis never restarts himself.

⚡ GET STARTED IN 7 STEPS

- 1 github.com/Sh4nkR/Jarvis-Max → green **Code** → **Download ZIP**
- 2 Right-click the ZIP → **Extract All** → put it on your Desktop
- 3 Double-click **Start-Jarvis-Max.bat** (Windows warning? More info → Run anyway)
- 4 First start downloads his parts. Sign in to Claude, or **BRAIN** → **Gemini** + a free key
- 5 Allow the microphone when the window asks
- 6 Press **TALK** (or F2), say **"hello"**, press it again
- 7 Make him yours: set **"call_me"** in app\jarvis.json

💻 WHAT YOU NEED

Windows 10 / 11 (64-bit) · a microphone · internet for the first start (about 2.5 GB) · at least one brain (Claude plan, free Gemini key, or Ollama + Qwen).

Optional: Sarvam key (best Hinglish ears) · DeepSeek key · NVIDIA GPU · Tesseract OCR · Android phone + Jarvis-Hands™ app.

Built by **Dr Wolf (Sh4nkR)** with **Claude** · Licence: **AGPL-3.0**, free for everyone · Face: ai-visualizer by Jared Rhodenizer (AGPL) + the Living Face · Brains: Claude Agent SDK, Gemini API, DeepSeek API, Ollama + Qwen · Ears: Sarvam AI Saaras V4, faster-whisper · Voice: edge-tts · Web: ddgs · Hands: PyAutoGUI

KNOWLEDGE + TIME = WISDOM ~ DR WOLF
